HEALTHCARE

VDM

Hospital-acquired infections:
A risk for our health, a cost for health-services.

Hospital-acquired infections represent a **real risk for public health and cause significant costs for the institutions**.

The drastic reduction of this problem represents a real challenge: every year in the European hospitals about 3,2 million patients get an infection, **which means that this effect is seen in 1 patient in 18**.
In Italy, for exemple, the number of patients getting an infection during their hospitalization is between 450 and 700 thousands per year.

Thanks to appropriate hygiene measures, a remarkable percentage of hospital-acquired infections could be prevented.

TOUCH FREE SYSTEM | **Unique and innovative**
The **winning choice** against **hospital-acquired infections.**

From VDM experience and knowledge **a new patented professional cleaning system**, **unique and innovative**, designed and realized to fight the hospital-acquired infections: **TOUCH FREE SYSTEM.**

Until today, **the operators were compelled to handle the dirty flat mop** while unlocking it from the frame. Using the new **TOUCH FREE SYSTEM**, **the operator never gets in touch with the dirty flat mop and with the frame**.

Patent n° PATENTED

Made in Italy

⊕ **No contact** with the **flat mops and the frame**

Thanks to the special clamps, **the flat mops are unlocked directly into the waste bucket in an easy and intuitive way, without using the hands**.

⊕ **No release** of **dirt**

Thanks to the innovative TOUCH FREE frame, **the flat mop is unlocked directly into the bucket, thus avoiding the release of dirt on the floor**, just like it happens with traditional cleaning systems. In this way, **there is no unlocking operation of the velcro flat mop close to the operator's face; this reduces the risk of germ and dirt inhalation**.

⊕ A remarkable reduction of **cross-contamination**

In order to get an optimal result, we recommend the use of TOUCH FREE SYSTEM with:

- Dispenser for disposable impregnated cloths: **the operator has to replace the impregnated cloth before starting the cleaning operation of each room**.
- **Three color coded buckets:** help prevent cross-contamination.

TOUCH FREE SYSTEM | **Easy and professional**

An **ergonomic system** in **3 simple moves.**

⊕ **It avoids the bending** of the operator's back

Thanks to this **innovative system**, the operator **can unlock the used flat mop directly into the bucket without bending his back**.

⊕ **A multifunctional system**

The operator makes less movements thus speeding-up the cleaning operations and reducing the risk of injuries.

TOUCH FREE SYSTEM | **Performing and cost-effective**
The best result with the **minimum expense**!

⊕ Tools saving

The frame without velcro doesn't wear, thus offering a longer duration. **The flat mops with pockets last longer and are resistant to frequent washings**.

⊕ **Water** and **detergents saving**

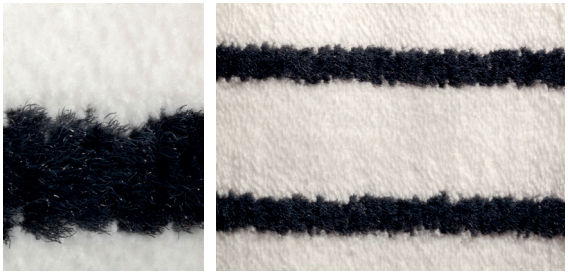

Reducing as much as possible the amount of detergents is an advantage for the operator's health and for the environment as well.
VDM pre-impregnation system drastically reduces the quantity of necessary detergent and water.

⊕ Time saving

The innovative TOUCH FREE SYSTEM grants high quality cleaning performances, remarkably **reducing working times** and **fatigue**.

VDM microfiber removes most of the bacteria, granting an "hospital-proof" hygiene.

Jolly (cod.70302)

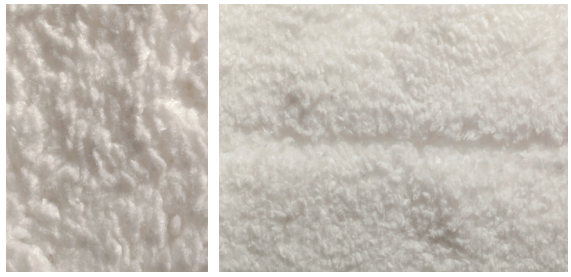

Description: Microfiber flat mop with stripes short-haired with trimmed edge - cm 43x14 with pockets.

Yarn composition:
White yarn: 100% polyester to grant a high cleaning level of the treated surface, catching and retaining the dirt.
Grey insert: 100% polyamide high-tenacity that help remove the hardest dirt.

Suitable for all kind of floors.

VDM Lab | **Soft** (cod.70402)

Description: white microfiber wet flat mop , shorthaired, with trimmed edge and with pockets - cm 43x14.

Yarn composition:
100% polyester to grant a high cleaning level of the treated surface, catching and retaining the dirt.
The edge is trimmed , not folded which makes the flat mop lighter and optimize the washing cycles

Suitable for treated porous surfaces.
